## Need tech support or a new computer for the office? Need it fast and with a personal touch?

### We can help...

#### Helping Small Businesses Grow Big

Since 1997, we have been building systems and solving technical problems A-to-Z and enabling employees to get the day's work done. Our technicians are often available for same-day technical support and equipment pick-up/drop-offs for your convenience and productivity. We have small business server technologies that will simplify daily activities. Personal Computing can review your current office technologies and recommend or implement solutions for virus protection, security, networks and work stations. We handle software installation, licensing, training and technical support and can provide everything you need to access your company information over a secure network (VPN).

#### Helping Corporations Add Resources

Through our national affiliations such as NASBA and the ASCII Group, we have negotiated buying power well beyond our size. We can provide additional short term or recurring technical support. We are network specialists and are pleased to collaborate with Corporate IT staff to maintain, upgrade and manage networks, servers, VPNs and more. Call today and find out how and why Personal Computing fits into your corporate IT department.

#### Helping Bring Homes Into The Digital Age

Experience more of the digital entertainment you want in your home. Create a secure home network and share resources such as internet access, printers, media and other files. Setting up a Home Office? We can help. You'll need one or more computers (Desktop or Notebook), monitors, printers, software... even an integrated surveillance system attached to your PC.

**Notebook PCs** | Unwire your office and your life with a notebook PC featuring the newest generation Intel® Centrino™ mobile technology. Step up to more powerful computing, increased audio/video quality, and greater wireless connectivity. Visit our website for up to date pricing.

**Custom Desktop PCs** | We will design and build a custom PC for your home or business needs. Our philosophy is to supply a PC that can be upgraded or re-purposed as needs change because what may be "good enough for now" is rarely good enough later.

#### Sample Systems

##### General Office PC
